GRAiT System

Leveraging the latest in context and sensory technologies, Raxar is pleased to introduce GRAiT System (**G**raphical **R**eaL-Time **A**sset **I**nspection and **T**racking System) a tool for the real time inventory, tracking and inspection of your assets.

The GRAiT System is a graphical asset management system for both indoor and outdoor asset inspections and tracking with a powerful secure cloud backend and a purpose driven user interface. GRAiTS assets are configurable, automatically locatable, and identifiable by sensor interfaces.

As the front-end interface for your organizations inspections and quality control, the GRAiT System functions to help management stay connected in real-time to the quality of their assets and the compliance of their staff and vendors. Legacy Inspection checklists can be imported and updated to meet quality and regulatory standards.

Keep your staff on task, and get rid of paper inspections. With a comprehensive User Interface staff can be up and running with the software with minimal training. Inspections can now be linked and analyzed in real time helping to make faster organizational decisions with smarter data.

The GRAiT system will help your organization incorporate all of its key asset management and facility inspections into one easy to use solution. A mobile application allows staff out in the field to inspect and track important assets. This allows real time analytics to keep management well informed of any issues, and keep them connected with vital information. The Grait system will lead your organization to becoming a metrics based operation, which will lead to confident decisions on how your organization can improve its ROI.

Your Organization All in One Solution

The GRAiT System saves organizations expense in operating and maintaining their assets, extending the longevity of assets, increasing the level of communications within their organization, and mitigating risk by record keeping about every asset in great detail. GRAiTS has immense flexibility when it comes to tying in with current organizational systems. This creates easy implementation and allows access to benefits faster.

Benefits

With the GRAiT system allow your organization access to many key features:

Inspections: The system is an easy intuitive way to make inspections on items and report any issues day to day. These inspections over time can lead to

educated decisions that could save your organization money by tracking vendor and manufacturer performance quality in your departments.

Flexibility: Built with an API based platform, the GRAiT System can tie in with your organizations current systems. Fully integrates with LMP to provide an efficient front-end inspection and asset management tool. Designed as a real time collaborative system, the tool is highly configurable to the end users needs and can be configured to meet different industry needs with out the need to program or customize the software. User has flexibility to create defect items that are not apart of everyday checklists, and in turn allowing the appropriate department to be notified.

Sensor and GIS integration: Allow your assets to both be tracked in real time and overlaid on to scaled blueprints, or geo-fenced CAD files. Stay connected to those assets through sensory technology including barcodes, gps navigation, and iBeacon technology. Staff can now find and identify individual assets simply even when your organization includes millions of items. High valued assets can be tracked and notify management immediately when removed from appropriate zone(s).

Role based permissions: Role Based Permissions allows members of multi-level clearance organization to keep staff privy to only material necessary for their duties. This can be applied for security measures, and can also function to keep staff on task.

Risk based measurements: GRAiTS scheduling and notifications engine updates the individual requirements of each asset and helps you in the workflow requirements of the operations. With all of the information available over the cloud in real time for analytics and reporting, your organization can stay informed about risk potentials. In turn, allowing your organization to keep a high quality standard by staying on top of discrepancies.

Metrics (key performance indicators): With GRAiTS status ranking system, back end analytics keep you informed on the overall performance condition of your departments. Be informed with alerts when departments of your organization drop below a certain performance percentage. Over time, track the overall history of assets allowing you to stay connected to certain vendor and manufacturer performance standards. With such granularity in reporting, make more informed decisions that could improve the quality standard of your organization

Security: With flexibility to incorporate into any data security structure , including server based or cloud based infrastructure, the GRAiT System give organizations the power to make flexible decisions to keep their data security at the highest strength level.

Cloud: GRAiT being a cloud based solution allows users to stay connected to each other in real time. Staff can access any assets or relevant process based information such as User Manuals, Warantees, Calibration Certificates and many more. With the GRAiT system staff can perform their inspection with or without connection. The system works by allowing the user to continue their work when signal is lost then uploads to the cloud instantly when they reach another point of connectivity.

Mobile: Current work order systems and asset management systems are having a problem in the transition to the mobile platform because they can often be clunky and hard to use. With GRAiT allow your staff to have minimal time and cost spent on training, so that your facility can quickly improve its inspections and maintenance of high valued assets.

Stay Connected

| GRAiT Features | | | |
|---|---|--|---|
| Asset Inventory, Tracking, Inspection, Maintenance | ✓ | Reduce time in data and inventory collection | ✓ |
| Facilitate Performance and Outcome based Measures | ✓ | Easy Integration Through Rest API | ✓ |
| One Location for all your Assets | ✓ | Reduce Training and Operations Times | ✓ |
| Context and Sensor Driven Smart Actions (GPS, ODB-2, etc) | ✓ | Alerts and Notifications | ✓ |
| Asset Specific Work Orders, Checklists, Punch Lists | ✓ | Easily configure and adjust your data and inventory needs on the fly | ✓ |
| Real time view of assets and data | ✓ | Improve Reporting and Analytics | ✓ |
| Highly Configurable Solution | ✓ | Facilitate Predictive Analytics | ✓ |

The GRAiT System

Powered By Raxar

Value Added Partnership:

No need to waste time and money overhauling your entire system. GRAiT System is an open API that can tie into your existing network. Allow GRAiTS to be the front-end inspection tool with smooth workflow to your LMP System. Start seeing immediate improvement in the quality of your data collection.

Fills Need:

GRAiT System keeps management informed of the right information at the right time. The system does this by running real time performance percentages on your departments sending an alert when it drops below the desired threshold. Full integration, improved data collection, and minimal training time makes the GRAiT System a great partnership for your organizations asset quality control management

Context Awareness

“The vision for context awareness is to expose as much of this sensory information as possible to business applications... It is something that can help people or other systems **make decisions faster**”

THANK YOU.
